SEWER PIPE REPLACEMENT HOLT DRIVE – PART II ENVIRONMENTAL ASSESSMENT FORM

Max Stach, our Town Planner, advised the Board that the Part II EAF had been prepared for their review. He further advised that the following potential impacts were identified and should be assessed in a Part 3:

The following potential impacts were identified and should be assessed in a Part 3:

1. Impact on Land - The reconstruction will be on land where the water table is at the surface. The Part 3 should assess the potential for impacts to land by construction activities in such an environment, and practices that may be employed to mitigate impacts. The Town Engineer should be able to assist with this assessment.
2. Impact on Land - The project may be located in a designated floodway. The local Floodplain Administrator (Bill Sheehan) should be consulted to determine whether the project will impact the Cedar Pond Brook floodway and whether it will comply with relevant regulations.
3. Impact on Water - The project site contains the Cedar Pond Brook, which is a protected water body. The potential for impacts to the protected water body should be assessed.
4. Impact on Water - The project proposes construction in a freshwater wetland or tidal wetland. The potential for impacts to the wetland should be assessed.
5. Impact on Water - The project is located within the 100-year floodplain and therefore has the potential to affect floodwater flows. The local Floodplain Administrator (Bill Sheehan) should be consulted to determine whether the project will impact the Cedar Pond Brook floodplain and whether it will comply with relevant regulations.
6. Impact on Water - The disturbance of soils during repair could result in significant erosion. The Town Engineer should discuss how potential erosion during construction can be controlled and mitigated.
7. Impact on Plants and Animals - The proposal could result in a reduction of a protected species, as protected species are believed to exist on the project site. The potential for such reduction should be discussed as should any means by which to avoid such impacts. The Town should retain a certified biologist to assess potential

impact and suggest appropriate mitigations. We can recommend such a professional as required.

8. Impact on Plants and Animals - The proposal could result in impacts to critical wetland wildlife habitat. The potential for such impacts should be discussed as should any means by which to avoid such impacts.

9. Impact on Public Health - The project site is located within 2,000 square feet of the Kay Fries Superfund site, which was previously used for the disposal of hazardous waste. It is unlikely that the area of disturbance contains contaminated soils, but the potential should be addressed and any needed mitigations discussed.

TOWN OF STONY POINT

RESOLUTION REQUESTING THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION TO REQUIRE AN ISSUES CONFERENCE IN CONNECTION WITH THE REQUEST MADE BY UNITED WATER NEW YORK INC. FOR PERMISSION TO CONSTRUCT AND OPERATE A DESALINATION PLANT IN ROCKLAND COUNTY

WHEREAS, United Water New York (UWNY) is the primary provider of drinking water to most of Rockland County and UWNY has an obligation to provide clean, safe water to its consumers in a cost effective manner without adversely affecting our environment; and

WHEREAS, UWNY has developed a proposal, known as the "Haverstraw Water Supply Project", which seeks to draw water from the Hudson River for use, after desalination treatment, as drinking water in Rockland County; and

WHEREAS, the New York State Department of Environmental Conservation (DEC) has assumed the status of lead agency for review of environmental impacts of the proposed project, issued a Positive Declaration under State Environmental Quality Review Act SEQRA dated April 2, 2009 and is now reviewing the Draft Environmental Impact Statement prepared by United Water New York; and

WHEREAS, an Issues Conference may be held under the rules of the New York State DEC to determine if there are disputed issues ripe for adjudication pursuant to 16NYCRR Section 624; and

WHEREAS, there are significant issues in dispute that require a finding of fact in order for the DEC to make a reasoned decision in the best interest of all stakeholders, including but not limited to the following:

- A. A study of the cost information included in the Haverstraw Water Supply Project DEIS conducted for the Rockland Water Coalition by ECONorthwest, an economics, finance and planning organization, found that there was a lack of transparency and documentation regarding data, assumptions, and analytic methods used to generate the cost results and, by excluding basic details, the cost section of the DEIS lacks credibility as a source of information for decision makers and stakeholders.
- B. The ECONorthwest study concluded that the cost analysis in the DEIS lacks transparency and documentation in its analysis of capital costs and operating or life-cycle costs, particularly energy costs including current and future costs of electricity to operate the facility, to pump water upslope from the water source to the plant, and the related cost of carbon emissions associated with energy demand for operating the Haverstraw Water Supply project, omissions which do not conform to industry standards for measuring and conducting cost-effective comparisons among competing alternatives.
- C. The ECONorthwest study indicated that the DEIS does not use consistent measures of cost effectiveness for all of the project alternatives, and further that the proposed project is not necessarily the most cost effective option.
- D. The ECONorthwest study concluded that the analytical deficiencies render the cost sections of the DEIS “almost useless” for those interested in understanding or independently verifying the analysis of cost results used in the DEIS, with the most significant omission being the lack of transparency and documentation regarding how the construction and operations and maintenance costs of the proposed project would impact ratepayers.
- E. The DEIS estimated that the project construction cost could vary from \$139 million to \$189 million, a spread of \$50 million, with no explanation as to why such a significant variance.
- F. FEMA has not yet issued new Advisory Base Flood Elevations for Rockland County to show the more accurate flood risk for communities affected by Hurricane Sandy, particularly Haverstraw and Stony Point.
- G. The five-year hydrological study of bedrock aquifers conducted by Paul Heisig of the U.S. Geological Survey for the County of Rockland, completed in 2011, indicates that the Newark Basin can and does replenish itself at sustainable rates based on available data and computer modeling and that peak water use rate during the summer needs to be addressed.
- H. The potential savings from a comprehensive conservation program in water usage and costs to ratepayers have not been evaluated, although the Massachusetts Water Resource Authority and the City of New York Department of Environmental Protection have reduced per capita water usage by implementing aggressive, fully financed conservation programs for their residential and commercial customers and have thereby postponed or negated the need for costly major infrastructure projects to increase water supply; and

WHEREAS, implementing an energy intensive solution – a desalination plant which requires electricity to pump water from the Hudson - to solve the problem of peak demand which has numerous other non-capital solutions is counter to Governor Cuomo’s sustainability agenda which seeks to reduce the impacts of climate change and to increase energy efficiency; and

WHEREAS, the County of Rockland was on the verge of building a multi-million dollar incinerator to burn municipal solid waste in the 1980s but instead constructed a state-of-the-art recycling facility which is significantly cleaner, more environmentally responsible and more cost effective than incineration and has put Rockland County in the forefront of the recycling effort in New York state; and

WHEREAS, denial of an Issues Conference would be a denial of due process to the residents of Rockland County, if not all of the residents of the State of New York;

NOW THEREFORE, BE IT RESOLVED that the Town Board of the Town of Stony Point urges the New York State DEC to protect the due process rights of all stakeholders by requiring an Issues Conference so that the disparities and competing

conclusions regarding data, assumptions and analyses concerning the permit application can be identified and adjudicated, and a well-reasoned decision reached; and

BE IT FURTHER RESOLVED, that the Town Clerk of the Town of Stony Point forward a copy of this resolution to Hon. Andrew M. Cuomo, Governor of New York State; Joseph Martens, Commissioner of the New York State Department of Environmental Conservation; Cesar A. Perales, Secretary of State, New York State Department of State; Eric T. Schneiderman, the New York State Attorney General; Garry A. Brown, Chairman of the New York State Public Service Commission; Hon. David Carlucci, New York State Senator; Hon. William Larkin, New York State Senator; the President Pro Tem of the New York State Senate; Hon. Kenneth P. Zebrowski, Jr., Hon. Ellen C. Jaffee, Hon. James G. Skoufis and Hon. Annie Rabbitt, Members of the New York State Assembly; the Speaker of the New York State Assembly; the Majority and Minority Leaders of the New York State Senate and Assembly; the United States Environmental Protection Agency; and Hon. Harriet Cornell, Chairwoman of the Rockland County Legislature.

WHEREAS, although Stony Point's Planning Department moved swiftly to ensure that current elevations would be established for Rockland County as well, FEMA indicated that the data would still not be available for two months; and

 - Additional \$1650 in revenue for local merchants
